

XM Satellite Radio has greatly improved my life. It allows me to listen to whatever I want. Somedays I like the new music stations, sometimes I turn on the old classics my Grandparents listen too. I have the freedom to listen to a wide variety of music from rock to jazz to country to the european hits to classical to movie soundtracks. I can even turn on entertainment news or CNN or all sports news or I can listen to comedy or my favorite the old time radio classics. XM is also great because it's a national station and it makes me feel more connected to people from all over the country, not just in the city I live. Recently, XM addetd the instant traffic and weather stations. I live in Chicago and this station has really helped me out in my commutes around the city. It's accurate and allows me to get the info I need when I need it. I don't have to wait for the 15min to half hour update the FM stations give. There is no way that the FCC should make XM eliminate these or any stations expecially since I pay for the services!!!! So please reject the NAB's petition 04-160!
